Above are all of the cards that show the pokemon and items that are generated from info from the api

At the very top is the navbar, first is the logo, then the pokemon and item buttons, which change from the index page(index page shows pokemon) to the items page, next to the items page is the search input to search for items or pokemon, the search type depends on whether you're on the index(pokemon) or the items page, and next to the text input is the button to execute the search. When the input in the search text input is incorrect, an error message is displayed to the user asking to check spelling and try again.
